

ASSIGNMENT: - 5

Question: - 1

Write a program to check whether a number is:

- Positive
- Negative
- Zero

Ans: -

```
1  # Check whether a number is Positive, Negative, or Zero
2  num = int(input("Enter a number: "))
3  √ if num > 0:
4      |   print("Positive Number")
5  √ elif num < 0:
6      |   print("Negative Number")
7  √ else:
8      |   print("Zero")
```

Output: -

```
Enter a number: 12
Positive Number
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```

```
Enter a number: -5
Negative Number
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```

```
Enter a number: 0
This is zero number.
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```

Question: - 2

Write a program to check whether a number is:

- Even
- Odd

Ans: -

```
# Check whether a number is Even or Odd

num = int(input("Enter a number: "))

if num % 2 == 0:
    print("This is Even Number")
else:
    print("This is Odd Number")
```

Output: -

```
Enter a number: 24
This is Even Number
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```

```
Enter a number: 23
This is Odd Number
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```

Question: - 3

Write a program to check whether a student is:

- Pass
- Fail

(Take passing marks as 33)

Ans: -

```
1  # Program to check whether a student is Pass or Fail
2  marks = int(input("Enter student marks: "))
3  if marks >= 33:
4      print("Pass")
5  else:
6      print("Fail")
```

Output: -

```
Enter student marks: 32  
Fail  
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```

```
Enter student marks: 36  
Pass  
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```

Question: - 4

Write a program to check the largest number among three numbers using if-elif-else.

Ans: -

```
# Program to find the largest number among three numbers  
num1 = int(input("Enter first number: "))  
num2 = int(input("Enter second number: "))  
num3 = int(input("Enter third number: "))  
✓ if num1 >= num2 and num1 >= num3:  
    | print("Largest number is:", num1)  
✓ elif num2 >= num1 and num2 >= num3:  
    | print("Largest number is:", num2)  
✓ else:  
    | print("Largest number is:", num3)
```

Output: -

```
Enter first number: 56  
Enter second number: 58  
Enter third number: 57  
Largest number is: 58  
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```

Question: - 5

Write a program to check whether a person is eligible for voting or not.

(Eligible age = 18)

Ans: -

```
# Program to check voting eligibility
age = int(input("Enter your age: "))
if age >= 18:
    print("You are eligible for voting.")
else:
    print("You are not eligible for voting.")
```

Output: -

```
Enter your age: 20
You are eligible for voting.
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```

```
Enter your age: 17
You are not eligible for voting.
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```

Question: - 6

Write a program to create a simple login system.

Conditions:

- If username and password are correct → Print "Login Successful".
- Otherwise → Print "Invalid Username or Password".

Ans : -

```
# Simple Login System
username = input("Enter username: ")
password = input("Enter password: ")
if username == "Ashwani Kumar" and password == "Anshu@78526":
    print("Login Successful")
else:
    print("Invalid Username or Password")
```

Output: -

```
Enter username: Ashwani
Enter password: Ashwani@92596.
Invalid Username or Password
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```

```
Enter username: Ashwani Kumar
Enter password: Anshu@78526
Login Successful
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```

Question: - 7

Write a program using Nested if statement for ATM withdrawal.

Conditions:

- First check PIN
- Then check balance
- If both are correct → Print "Transaction Successful"
- Otherwise print proper message.

Ans: -

```
1  # ATM Withdrawal using Nested if
2  correct_pin = 9296
3  balance = 250000
4  pin = int(input("Enter ATM PIN: "))
5  if pin == correct_pin:
6      amount = int(input("Enter withdrawal amount: "))
7      if amount <= balance:
8          print("Transaction Successful")
9          balance = balance - amount
10         print("Remaining Balance:", balance)
11     else:
12         print("Insufficient Balance")
13 else:
14     print("Incorrect PIN")
```

Output: -

```
Enter ATM PIN: 9125
```

```
Incorrect PIN
```

```
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```

```
Enter ATM PIN: 9296
```

```
Enter withdrawal amount: 200000
```

```
Transaction Successful
```

```
Remaining Balance: 50000
```

```
PS D:\Data Science with AI & ML\PYTHON\Assignment 5>
```
